Technical Bulletin (TB-2402): XP95 I.S. Detector update

Reason for notification:

As you may be aware, over the last two years we have been updating some of our products to remove components that were made obsolete in the aftereffects of COVID-19. These updates were required in both the XP95 I.S. Optical Detector and I.S. Heat Detector.

To minimise disruption, orders that were in the system and had already accepted the reduced approvals detailed in TB-2302, were prioritised. However, due to some delays with the development and an unprecedented demand on the obsolete component we have been unable to fulfil all your orders.

Detail:

Affected Part Number	Product Description
55000-440APO	XP95 I.S. Heat Detector (A2S)
55000-640APO	XP95 I.S. Optical Detector

While we have been working hard to minimise the impact on our customers, we are aware that there have been extended lead times and uncertainty when the devices will be back.

Both products are now in approvals, and we expect to start production again in June 2024.

We will be working on a phased approvals launch as to not cause any further delays to our customers. These phases will be:

- Phase 1 – Jun-2024: CPR, UKCA, ATEX, UKEx, IECEx, MED, UK Marine
- Phase 2 – Oct-2024: Lloyds Register, DNV, BOSEC
- Phase 3 – Dec-2024: CCS, PESO, SIL

Remedy

Unfortunately, there is no direct replacement for this product until the updated version is available. See above for dates. In the coming months, your account manager will be in contact to confirm which phase your order can be released in.

Questions

Should you have any further questions, please contact your account manager.
