## Technical Bulletin (TB-2106): Flame Detectors

### Reason for notification:

For our range of flame detectors, we have received component obsolescence notification, and this is impacting our ability to supply products.

### Detail:

Our Flame Detectors have had a component obsolescence notification. The original sensor manufacturer stopped making this sensor, and an alternative part has been integrated into the products. The range is therefore going through the approval test house, BRE. Our suppliers have advised that deliveries should re-commence once re-approval is completed; currently anticipated to be beginning of July 2022 for standard flame detectors and October 2022 for Base mount flame detectors. Therefore, there will be a gap in the supply of these products. All products of the model numbers identified below are affected by this issue.
